Since the 1970’s, Florida’s seen 1 foot of sea-level rise. Now, we’re on track for 2 feet by 2050.

Florida leaders understand the threat from 2 feet of sea-level rise. They know it’s time to act. Let’s get our political leaders to set a 2 feet limit on sea-level rise before it’s too late.
KEEP FLORIDA ABOVE WATER
SET A 2 FEET LIMIT ON SEA-LEVEL RISE

Beyond 2 Feet of Sea-Level Rise, the Cost of Doing Business in Florida Rises Even More.

BEYOND 2 FEET: Increased Flooding & Property Loss

- Immobilized traffic, flooded buildings, and infrastructure
- Abandoned properties and reduced tax base
- Eroded shorelines and salt water intrusion harming estuary ecosystems and wildlife

More than 2 feet of sea-level rise is exponentially more expensive and dangerous. Florida is poised to adapt to 2 feet of sea-level rise already baked in from emissions, but we must stop it there.

BEYOND 2 FEET: Water & Sewage Systems Fail

- Low elevation sewers fail during coastal flooding, impacting millions of people.
- Failing drinking water infrastructure exposes people to pathogens and harmful chemicals

It’s not too late to stop the seas from rising above 2 feet.

We can and must reduce emissions that cause sea-level rise to protect Florida’s future.
